

Course Material No.7

ROK Market Opportunity: Chemicals, Plastics & Rubber, Machinery Parts, Medical Instruments

Course 7: ROK Market Opportunity – Chemicals, Plastics & Rubber, Machinery Parts, Medical Instruments aims to provide a comprehensive market overview of industrial products in the Republic of Korea (ROK).

This Course focuses on major products with high export potential from Central America to ROK: **Herbicide**(HS Code 380893), **Plastic Film**(HS Code 392020), **Ignition Wiring Sets for Vehicles** (HS Code 902139), **Catheter and Cannulae**(HS Code 901839), **Breast Implants** (HS Code 902139).

By the end of the course, learners will be able to:

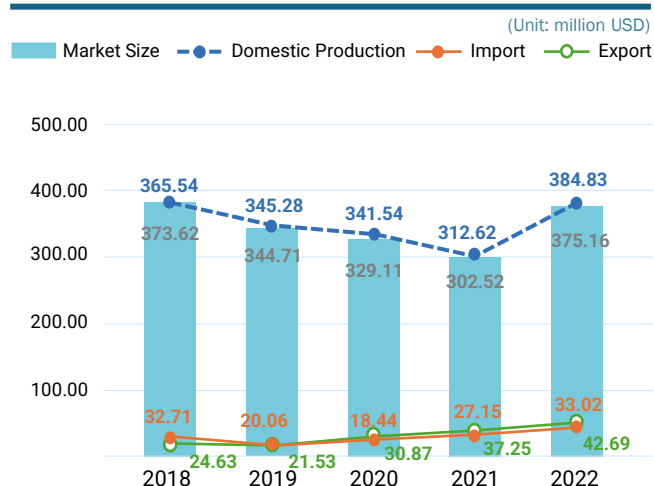

- Understand the ROK market trend and prospect of major products;
- Identify ROK market drivers, competitiveness, opportunities and risks and
- Acknowledge the regulatory requirements for export to ROK market.

HERBICIDE

Key Facts

- ❖ The herbicide market shows a relatively stable market size despite a small drop and recovery in 2021 and 2022, and reached 375 million USD in 2022.
 - While the Korean herbicide market appears to heavily rely on domestic production, imports accounted for 23% of total value in 2022 showing a gradual increasing trend.
- ❖ The herbicide market in Korea is largely dominated by imports from Chile, Indonesia, and India, which collectively account for 83% of the total market.
 - Korea's major trade partner, China, benefits from full tariff elimination.

ROK herbicides market trend in value (2018-2022)

* Source : Author

Import volume of Herbicides per country (2018-2022)

(Unit: Ton)

	2018	2019	2020	2021	2022

- ❖ In ROK herbicide market, the increasing interest in natural and eco-friendly herbicides is underscored by various policy measures, as the agricultural herbicide sector faces significant environmental regulations regarding production amounts, methods, and pricing.
- ❖ To export herbicides to Korea, two import requirements must be addressed in accordance with relevant laws and regulations.
 - First, exporters must have the necessary facilities, equipment, self-inspection officers, and qualified sales managers, along with a business registration certificate.
 - They must prepare a pesticide registration application and samples for testing, which must be submitted to the Rural Development Administration (RDA) for import registration.
 - Second, under the Chemicals Control Act, certain substances, including 2,4,5-T, Trifluralin, Paraquat salts, and 4,5-Dichloro-2-N-octyl-4-isothiazolin-3-one, as well as mixtures containing these substances in concentrations of 1% or more, cannot be imported.
 - Additionally, the background color of the label and the lid of the container must be yellow.

▶▶ Market Insights

- ❖ Central American exporters can benefit from tariff reductions under the K-CA FTA, making their herbicide products more competitive in the Korean market.
- ❖ Although the growing consumer preference on eco-friendly products may limit demand for traditional herbicides, the opportunity of supplying high-functionality, high-value products and low-toxicity eco-friendly options could be explored.

Strengths

- Tariff reductions under the K-CA FTA

Weaknesses

- Declining total import volumes

Opportunities

- Underperformance of natural product and remained customs of using chemical herbicides
- Eco-friendly and low toxic herbicide market

Threats

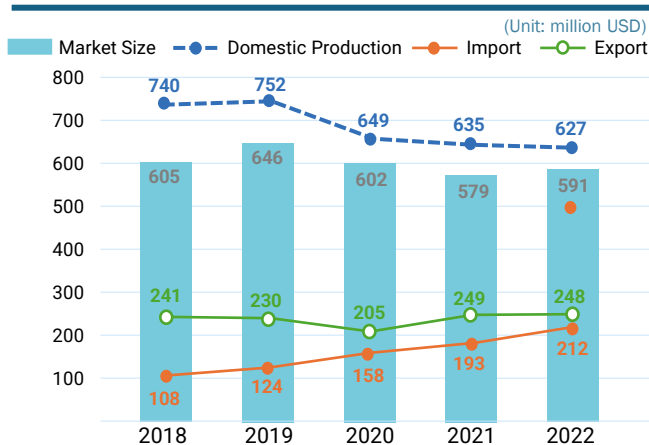

- Dominance of domestic production
- Strong competition from China and India

PLASTIC FILM

Key Facts

- ❖ Since 2013, the Korean government imposed anti-dumping tariffs on the plastic film products from China, Indonesia, and Thailand, creating opportunities for entry into the Korean market, a major importer of plastic packaging materials.
- ❖ The annual Plastic Film market maintained an average size of 600 million USD between 2018 and 2022.
 - Overall, the market is largely self-sufficient by domestic plastic film production.
- ❖ Currently, the major suppliers of plastic film to Korea are China, Indonesia, and Japan, accounting for 63% of the total imports.
 - China and Indonesia, the largest exporters of plastic film, benefit from full tariff elimination.

ROK plastic film market trend in value (2018-2022)

* Source : K-CA FTA text, FTA Korea

- ❖ Recognizing the serious impact of plastic use on the climate crisis and waste generation, Korean consumers are avoiding plastic packaging, and the government is actively engaging in ESG management.
 - There is a growing demand for biodegradable plastics, recyclable plastics, and related technologies, leading to new regulations for environmental protection.

Korean government's measures to remove plastics for Circular Economy

ROK goals: Reduce Plastic waste by 20% until 2025

Reduce	<ul style="list-style-type: none"> Reduce excessive wrapping Offer alternative options Offer incentives to customers 	Recycle	<ul style="list-style-type: none"> Offer plastic waste to be reproduced Promote recycle
Support by the Industry	<ul style="list-style-type: none"> Support develop recycle materials (regradable) Promot new technology, business 	Account ability	<ul style="list-style-type: none"> Proactively lead int'l agreements for removing plastics

- ❖ Nevertheless, Korea remains one of the top 20 global importers of plastic packaging materials.
 - The rising popularity of Home Meal Replacement (HMR) products and food delivery has significantly contributed to the surge in demand for plastic film used in food packaging.

- ❖ Plastic film and foil used in the food industry must undergo precise inspection by the Commissioner of the Ministry of Food and Drug Safety (MFDS).
 - Before importation, the overseas manufacturing facility operator or importer must submit documents, including a foreign factory registration certificate, to register the overseas manufacturing facility with the MFDS.
- ❖ Once the registration of the overseas manufacturing facility is completed, the importer must proceed with business registration for importing and selling.
 - After passing the MFDS precise inspection, proper customs clearance procedures can be initiated.

▶▶ Market Insights

- ❖ A social trend to reduce plastic use is emerging, which is anticipated to lead to a decline of the plastic market.
- ❖ While domestic production of plastics is decreasing, it remains significantly larger than imports, with domestic production valued at 630 million USD, compared to imports valued at 210 million USD.
- ❖ Small businesses tend to be less sensitive to government regulations and shifting social trends, presenting opportunities for Central America exporters to secure long-term contracts.
 - To successfully enter the Korean plastic market, targeting small business, such as individual coffee shops and restaurants, is crucial.
 - In fact, the top 10 exporters primarily supply these smaller establishments.
- ❖ Additionally, the growing demand for the mono-materialization of polypropylene(PP) or polyethylene(PE) for resource recycling is expected to enhance the popularity of BOPP(Biaxially Oriented Polypropylene) films, which can be recycled without emitting harmful substances.

Strengths

- Tariff reductions under the K-CA FTA

Opportunities

- Sustained demand from smaller businesses
- Increased interest in recyclable BOPP films

Weaknesses

- Trend towards reduced plastic use

Threats

- Still a high level of domestic production

IGNITION WIRING SETS FOR VEHICLES

Key Facts

- ❖ The ignition wiring sets market is expected to grow steadily, driven by electric vehicles growing at 37.7% annually, from 1.28 billion USD in 2021 to 6.33 billion USD by 2026.
- ❖ Annual ignition wiring sets market size in value has shown an annual growth rate of 5.35% rising from 4.67 billion USD in 2018 to 5.74 billion USD in 2022.
 - Domestic production accounts for 66.61% of total market value in 2022. While imports represent a significant portion, accounting for 45%, exports constitute a smaller proportion, making up 11%.
 - It indicates that the majority of wiring sets consume in the market are produced domestically with only small amounts are exported.
 - This suggests a balance between imported and domestically produced wiring sets, with the local manufacturing sector playing a crucial role in meeting domestic demand.
- ❖ The imported ignition wiring market in Korea is largely dominated by China, Vietnam, and the Philippines, which collectively account for 97% of the total market.
 - China, as the largest exporter, will benefit from full tariff elimination starting in 2024.

ROK ignition wiring sets in value (2018-2022)

Import volume of Ignition wiring sets per country (2018-2022)

- ❖ The global electric vehicle ignition wiring set (wiring harness) market is expected to grow from 1.28 billion USD in 2021 to 6.33 billion USD by 2026.
- Electric vehicles require about 30% more ignition wiring than conventional vehicles, and research on lightweight solutions using Flexible Printed Circuit Boards(FPCB) is currently underway.

Wiring Harness Used in Automobiles

Wiring harness market size forecast by electric vehicle type

- ❖ Given the extensive manual labor required, Korea's imports are typically conducted through Korean companies' overseas factories, resulting in a highly competitive and closed market. Entering this industry necessitates technological capabilities, production capacity, and established relationships with vehicle manufacturers.
- Large companies generally produce engines and transmissions, medium-sized firms manufacture functional parts, while smaller businesses often subcontract for simpler components.

Market Insights

- ❖ Korea ignition wiring sets market is expected to grow rapidly, with an average annual growth rate of 37.7% by 2026. Most importantly, the K-CA FTA enhances this opportunity by fully eliminating tariffs.
- ❖ Korea's automotive parts industry has developed strong vertical integration with vehicle manufacturers, making long-term relationships with promising buyers essential for success.
- ❖ As electric vehicles (EVs) require approximately 30% more wiring than conventional vehicles, the demand for ignition wiring harness sets is expected to increase alongside the growth of the EV market.

Strengths

- Anticipated rapid market growth by 2026
- Tariff reductions under the K-CA FTA

Weaknesses

- Vertical integration between Korean car manufactures and suppliers

Opportunities

- Increased demand driven by the wiring requirements of electric vehicles
- Necessity of building long-term partnerships in a competitive environment

Threats

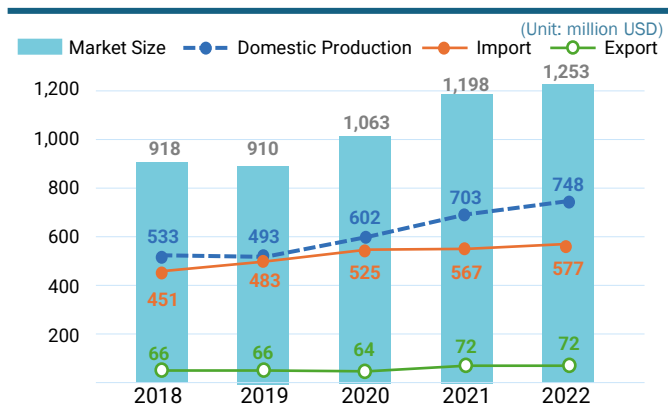

- Strong competition from major ignition wiring sets exporters in China, Vietnam, and the Philippines.

CATHETER AND CANNULAE

Key Facts

- ❖ The increasing aged population and advanced medical technologies, as well as increased income level have led to a sustained the rise of demand for medical instruments, such as catheter and cannulae.
- ❖ The annual market size for catheters and cannulae has shown a growth rate of 8.31%, rising from 918 million USD in 2018 to 1.25 billion USD in 2022.
- ❖ Major suppliers, including China, Vietnam, and Philippines, control 48% of the medical instruments market.
 - China and Vietnam, as the largest exporter of medical instruments, benefit from full tariff elimination.

- ❖ The CA countries have a comparative advantage due to the lower tariffs applied to medical instruments.
 - The K-CA FTA is expected to further benefit CA countries by reducing tariffs, with full elimination anticipated for Nicaragua by 2025, and Guatemala by 2026.

Tariff on HS Code 901839 as of 2024

Country	HS Code	Product	Current rate (2024)	Elimination of custom duties

- ❖ According to Health Insurance Review & Assessment Service and the National Health Insurance Service, the per capita medical expenses for the citizens increased from 7.41 million USD in 2018 to 5.03 million USD in 2022, representing an increase of about 30 percent.
 - With the improvement of income levels and the progression of population aging, the medical device industry is experiencing continuous growth.
 - Examining the performance trend of medical device production over the past five years, the market size of from 5.17 billion USD in 2018 to 11.93 billion USD in 2022, indicating two-fold increase.
- ❖ Eco-friendly products are becoming increasingly popular in the medical device market.
 - For example, Medi Line Active Korea has developed the first liquid infusion set made from eco-friendly polyurethane.
- ❖ In the case of catheters, targeted products are being introduced.
 - Medtronic has created a drug-coated balloon catheter (IN.PACT™ AV DCB) that effectively treats blockages in hemodialysis patients.
 - Also, the Ministry of Food and Drug Safety has designated "vascular tubes and catheters for cardiovascular surgery" as urgently needed medical devices for children with heart conditions.

Market Insights

- ❖ The medical device market in Korea is experiencing stable growth, supported by rising income levels and an aging population.
- ❖ This trend is further enhanced by the K-CA FTA enhances this opportunity by fully eliminating tariffs.
- ❖ Given the nature of medical devices, which directly or indirectly contact the human body, they are subject to rigorous regulations to ensure safety and efficacy.
- ❖ Competition in this sector is intense, with both global companies operating in Korea and domestic small and medium-sized enterprises vying for market share.
- ❖ Yet, there remains a significant opportunity in the import market, particularly for products like blood transfusion sets and catheters, where import shares are relatively high. This trends indicates a growing acceptance of imported medical devices, making it a promising area for expansion.

Strengths

- A stable and promising market for medical devices in Korea for global exporters
- Tariff reductions under the K-CA FTA

Opportunities

- Consistent upward trend over the past five years
- Relatively high import ratio compared to other product in ROK markets

Weaknesses

- Strict regulations and quality standards

Threats

- Strong competition between global companies and domestic small and medium-sized enterprises
- Price competition from major exporting countries

BREAST IMPLANTS

Key Facts

- ❖ Over the past 25 years, the number of Korean surgeries has increased ninefold. This trend creates greater opportunities for breast implants suppliers.
- ❖ The annual market size for breast implants has shown an impressive growth rate of 29.7%, rising from 183 million USD in 2018 to 347 million USD in 2022.
 - The share of domestically produced breast implants is nearly zero, indicating a complete dependence on imports.
- ❖ The breast implants market in Korea is largely dominated by imports from the U.S., Costa Rica, and Singapore which account for 73% of the total market.
 - The U.S. and Ireland, as the largest exporters, benefit from a 0% tariff rate under the KOR-US FTA and the Korea-EU FTA.

- ❖ Breast cancer has emerged as the most common cancer among Korean women, leading to a noticeable increase in preventive mastectomies.
 - Interest in mastectomy has increased for oncological safety, with the number of preventive mastectomies rising significantly.
 - Additionally, a health insurance policy that began subsidizing 50% of reconstruction surgery costs in 2015 has significantly increased the demand for post-mastectomy reconstruction surgeries.

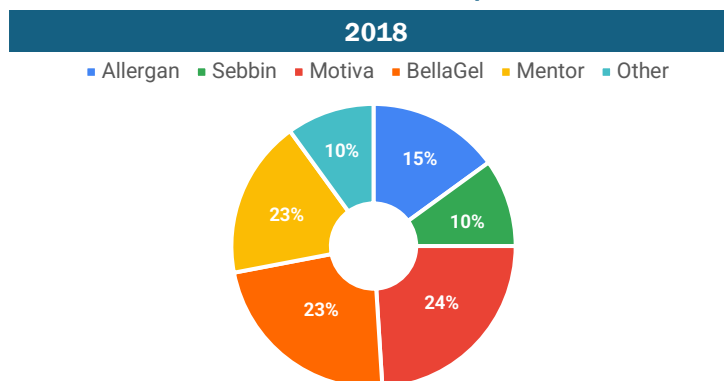

Breast Reconstruction Patient Count in Korea

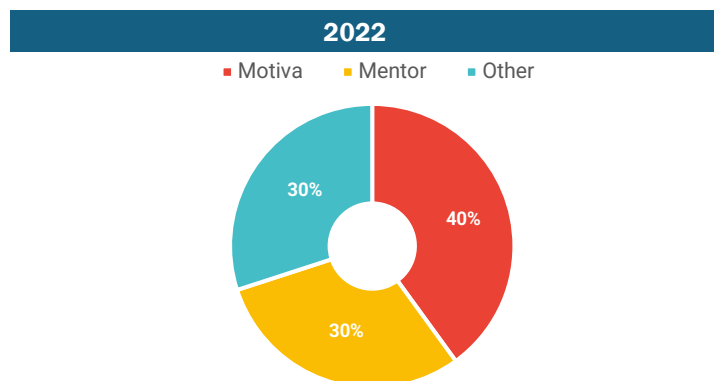

* Source : Health Insurance Review and Assessment Service (HIRA), 2023

- ❖ Major brands like Motiva and BellaGel are leading the market, with consumer preferences highlighting product awareness and minimal side effects.
- Domestic companies such as HansBioMed are making strides by offering innovative products like BellaGel Smooth Fine, which provide significant advantages in texture and safety.

Domestic Market Share of Breast Implant Brands (2018 and 2022)

Factors Considered When Choosing Implants

* Source : Maekyung Health, 2021

* Source : Maekyung Health, 2021

Market Insights

- ❖ Korea has a deep-rooted culture of cosmetic surgery, which fosters a supportive environment for the domestic breast implant market.
- ❖ With a rising number of breast cancer patients among Korean women, there is a growing demand not only for treatment but also for restoring procedures to help patients regain their previous normal appearance.
- ❖ Most importantly, the K-CA FTA enhances this opportunity by fully eliminating tariffs.
- ❖ However, concerns about breast surgery persist. Many individuals are aware of potential health risks and the negative impacts such procedures may have on childbirth and breastfeeding.
- ❖ The regulatory landscape for medical devices in Korea is complex, presenting challenges to enter the market.
- ❖ Established foreign brands like Motiva and Mentor have made significant inroads in Korea.

Strengths

- Cultural acceptance of breast surgery
- Tariff reduction of CA product under the K-CA FTA

Weaknesses

- Awareness of the negative impacts of surgery
- Complex medical device regulations

Opportunities

- Growing demand for breast surgery for health and esthetics reasons

Threats

- Competition from established foreign brands
- Strengthening domestic brand competitiveness

▶▶ Import Regulations and Process

- ❖ Central American exporters must thoroughly review the relevant import regulations and processes.
 - Exporters looking to export medical instruments are required to apply for an import business license from the Ministry of Food and Drug Safety (MFDS).
 - Once the import license is approved, it's necessary to submit technical documents, clinical trial data, or review results to apply for import certification.
 - Following the receipt of import certification or permission, a Korean label must be prepared to attach to the container or packaging of the medical device.

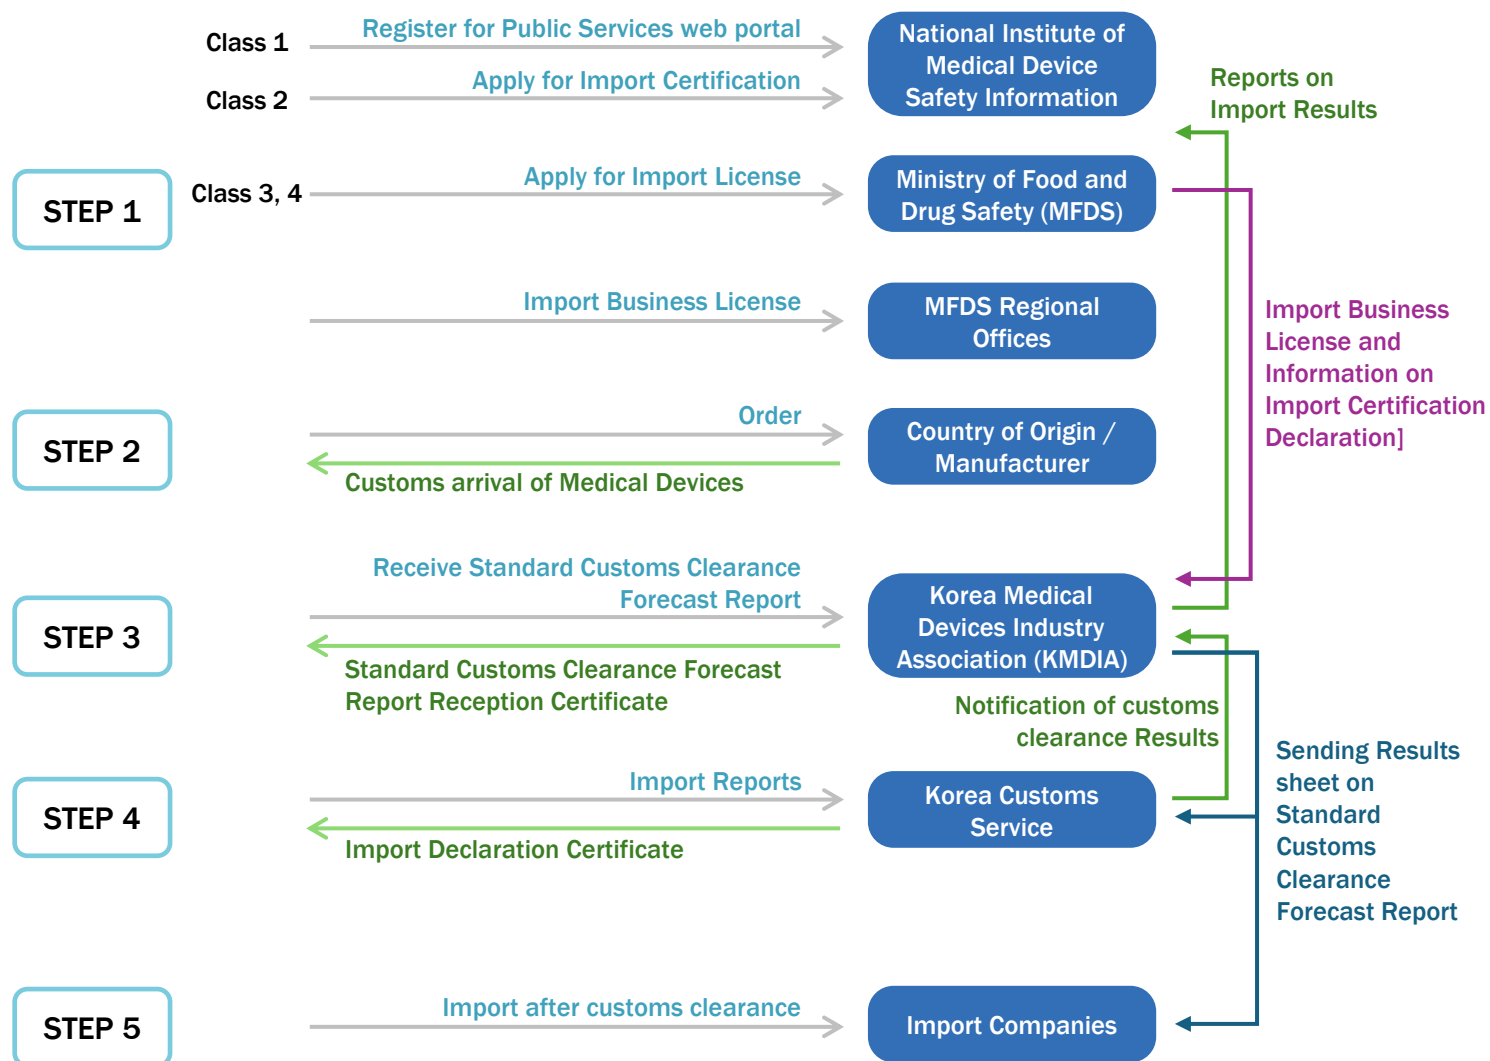

Labeling Requirements for Medical Devices

Label Location	Details
Labeling on Containers	<ol style="list-style-type: none"> 1. The trade name and address of the manufacturer or importer; 2. If imported, the origin of manufacture (the name of the country of manufacture and of the manufacturer). 3. Permission (certification or notification) number and name (name of a product, item or model). In such cases, the name of a product shall be limited to where there exists a name of a product; 4. The manufacturing number and the date of manufacturing (the use-by date may be stated in lieu of the date of manufacturing, if the use-by date exists); 5. Weight or packaging unit; 6. - ❖ After completing all preparations, a standard customs clearance forecast report must be submitted to the Korea Medical Devices Industry Association based on the shipment documents. This will allow for the issuance of an ENTRY NOTICE OF IMPORTED PRODUCTS to proceed with customs clearance.

Import Process of Medical Device

Labeling

- ❖ Proper Labeling requires a Korean label with specific details, including product name, country of origin, production or packaging date, and importer information to ensure transparency and consumer safety.

Information to be included in the Product label

Product Name	
Raw ingredients and contents	
Country of Origin	
Date of production or date of packaging	
Packaging Material	
Storage Method	
Name and Location of the Importer	
Import sales business contact information	
Returns and exchanges information	

We look forward to supporting your success in the ROK market.
